The TIGR Rice Annotation and Informatics

Listed below is a collection of information on Rice Annotation and Informatics at TIGR. Please follow the links to get more detailed information for each project.

- **Rice Distributed Annotation System (DAS)**
All annotated rice BACs can now be viewed through our DAS viewer. [Click here](#) to read how the use the TIGR CGI based DAS viewer (In development).
- **Whole Automated Rice Genome Annotation Database**
This database contains all rice BAC/PAC sequences in GenBank. These sequences were processed through an automated annotation pipeline. Annotated sequences can be searched on a BLAST server, searched by gene name, and are displayed based on their map position.
- **TIGR Curated Rice Annotation Database**
This database contains every sequence derived from the TIGR rice genome sequencing project. Annotated sequences will be displayed based on their map position, can be searched on a blast server, and can be searched by gene name.
- **TIGR Plant Ortholog Database**
As part of our Rice Genome Program, we are identifying putative orthologs and paralogs in our rice sequences. [Click here](#) to see the first release of the TIGR Plant Ortholog Database.

Biology WorkBench

The **Biology WorkBench** is a web-based tool for biologists. The WorkBench allows biologists to search many popular protein and nucleic acid sequence databases. Database searching is integrated with access to a wide variety of analysis and modeling tools, all within a point and click interface that eliminates file format compatibility problems.

If you encounter any problems or find any bugs in the Biology Workbench, and are unable to send a bug report from within the software, please send a report to bwbhelp@sdsc.edu

Enter the Biology Workbench 3.2

<http://workbench.sdsc.edu/>

Set up a free account (required, but painless)

Suggested Web Browser: we suggest that people use Netscape Communicator or Navigator, preferably the latest version that can be obtained (any 4.x version should work well). Microsoft Internet Explorer (especially older versions) can be unpredictable when loading the Biology Workbench. In addition, because we are unable to force Internet Explorer to open secondary windows with our software, showing database records and reading help pages can be a bit clumsy. Nonetheless, most Biology Workbench operations **should** work within Internet Explorer.

Some people notice browser-related problems that go away when one clears the disk cache, and turning off the disk cache altogether when using the Biology Workbench might be a good idea. Also, your memory cache should be set as high as comfortable, as some of our pages can take up quite a bit of space in your

Introduction

LocusLink provides a single query interface to curated sequence and descriptive information about genetic loci. It presents information on official nomenclature, aliases, sequence accessions, phenotypes, EC numbers, MIM numbers, UniGene clusters, homology, map locations, and related web sites.

Sequence accessions include a subset of GenBank accessions for a locus, as well as a new type, the NCBI Reference Sequence (RefSeq). RefSeq records are built according to the process [detailed here](#). See the [About](#) and [FAQ](#) pages for more information.

Data can be accessed by clicking one of the letters above to browse loci sorted by symbols, or by entering a query into the search form. Use of wild cards (*) is supported. Additional information and query tips are provided in the [Help](#) documentation.

The current scope is *Caenorhabditis elegans*, cow, fruit fly, human, human immunodeficiency virus type 1, mouse, rat, and zebrafish.

In order to support the public use and dissemination of gene expression data, NCBI has launched the Gene Expression Omnibus. GEO is a gene expression and hybridization array data repository, as well as an online resource for the retrieval of gene expression data from any organism or artificial source.

Repository contents	
Platforms	176 (160 Mb)
Samples	3899 (2452 Mb)
Series	126

Sun Feb 23 01:30:30 2003 EDT

Many types of gene expression data from platform types such as nucleotide, antibody and tissue arrays and serial analysis of gene expression (SAGE) data, will be accepted, accessioned, and archived as public data sets.

"Briefs" of the various [data retrieval](#) and [data deposit](#) mechanisms as well as [repository design](#) are a good place to start for the new user.

Recent news

May 2, 2002
The platform types of filter, high density oligonucleotide array (HDA), microarray and antibody array have been deprecated (retired). The platform types of commercial nucleotide, commercial antibody, commercial tissue, non-commercial nucleotide, non-commercial antibody, non-commercial tissue and other are their replacements. This change was made in order to increase clarity

OMIM™ - Online Mendelian Inheritance in Man™

NEW OMIM is now incorporated into NCBI's Entrez system and can be queried using the same approach as the other Entrez databases such as PubMed and GenBank. The previous OMIM pages are still available [here](#).

Welcome to OMIM, Online Mendelian Inheritance in Man. This database is a catalog of human genes and genetic disorders authored and edited by Dr. Victor A. McKusick and his colleagues at Johns Hopkins and elsewhere, and developed for the World Wide Web by NCBI, the National Center for Biotechnology Information. The database contains textual information and references. It also contains copious links to MEDLINE and sequence records in the Entrez system, and links to additional related resources at NCBI and elsewhere.

You can do a search by entering one or more terms in the text box above. Advanced search options are accessible via the Limits, Preview/Index, History, and Clipboard options in the grey bar beneath the text box. The [OMIM help](#) document provides additional information and examples of basic and advanced searches.

- NCBI, Google gibi WEB sayfası araması için kullanılabilir.

The screenshot displays the NCBI Site Search interface. At the top, the NCBI logo is on the left, and the title "NCBI- Site Search" is in the center. Below the title is a navigation bar with tabs for PubMed, Nucleotide, Protein, Genome, Structure, Popset, and Taxonomy. A search bar contains the text "cancer" with "Go" and "Clear" buttons. Below the search bar are links for Limits, Preview/Index, History, Clipboard, and Details. On the left side, there is a sidebar with links to Entrez, PubMed Search, NCBI Site Map, Quick Links, Help, and FAQ. The main content area shows the search results for "cancer", indicating 265 matches under 37 home pages. The first result is "Genes and disease", which provides a description of the resource and a link to view all 265 results. The second result is "Cancer", which also provides a description and a link to view all 19 results. The third result is "Collaborative Cancer Research", which provides a description and a link to view all 28 results. The fourth result is "Cancer Genome Anatomy Project (CGAP)".

What is bioinformatics?

Bioinformatics is the field of science in which biology, computer science, and information technology merge into a single discipline. The ultimate goal of the field is to enable the discovery of new biological insights as well as to create a global perspective from which unifying principles in biology can be discerned. There are three important sub-disciplines within bioinformatics:

- ▶ the development of new algorithms and statistics with which to assess relationships among members of large data sets;
- ▶ the analysis and [interpretation](#) of various [types of data](#) including nucleotide and amino acid sequences, protein domains, and protein structures; and
- ▶ the development and implementation of tools that enable efficient access and management of different types of information. [More...](#)

Book List

Basic Neurochemistry, Molecular, Cellular, and Medical Aspects. 6th ed.

Siegel, George J.; Agranoff, Bernard W.; Albers, R. Wayne; Fisher, Stephen K.; Uhler, Michael D., editors
Philadelphia, Pennsylvania: [Lippincott, Williams & Wilkins](#); c1999.
ISBN 0 397 51820 X

C. elegans II.

Riddle, Donald L.; Blumenthal, Thomas; Meyer, Barbara J.; Priess, James R., editors.
Plainview (NY): [Cold Spring Harbor Laboratory Press](#); c1997.

Cancer Medicine. 5th ed.

Bast, Robert C.; Kufe, Donald W.; Pollock, Raphael E.; Weichselbaum, Ralph R.; Holland, James F.; Frei, Emil, editors.
Canada: [BC Decker Inc](#); c2000.

The Cell - A Molecular Approach. 2nd ed.

Cooper, Geoffrey M.
Sunderland, Massachusetts: [Sinauer Associates, Inc.](#); c2000.
ISBN 0 87893 106 6

Developmental Biology. 6th ed.

Gilbert, Scott F.
Sunderland, Massachusetts: [Sinauer Associates, Inc.](#); c2000.
ISBN 0 87893 243 7

Immunobiology. 5th ed.

Janeway, Charles A.; Travers, Paul; Walport, Mark; Shlomchik, Mark.
New York and London: [Garland Publishing](#); c2001.

Introduction to Genetic Analysis. 7th ed.

Griffiths, Anthony J.F.; Miller, Jeffrey H.; Suzuki, David T.; Lewontin, Richard C.; Gelbart, William M.
New York: [W H Freeman & Co](#); c1999.

Genes and disease.

National Institutes of Health
[NCBI](#); Not under copyright.

The Human ATP-Binding Cassette (ABC) Transporter Superfamily.

Dean, Michael
Monograph
Bethesda (MD): [NCBI](#), [National Library of Medicine](#) (US); 2002 Nov.

Kitaplar

The Human ATP-Binding Cassette (ABC) Transporter Superfamily.

Dean, Michael
Monograph
Bethesda (MD): [NCBI](#), [National Library of Medicine](#) (US); 2002 Nov.

Medical Microbiology. 4th ed.

Baron, Samuel, editor
Galveston: [University of Texas Medical Branch](#); c1996.
ISBN 0 9631 1721 1

Modern Genetic Analysis.

Griffiths, Anthony J.F.; Gelbart, William M.; Miller, Jeffrey H.; Lewontin, Richard C.
New York: [W H Freeman & Co](#); c1999.

Molecular Biology of the Cell. 3rd ed.

Alberts, Bruce; Bray, Dennis; Lewis, Julian; Raff, Martin; Roberts, Keith; Watson, James D.
New York and London: [Garland Publishing](#); c1994.

Molecular Cell Biology. 4th ed.

Lodish, Harvey; Berk, Arnold; Zipursky, S. Lawrence; Matsudaira, Paul; Baltimore, David; Darnell, James E.
New York: [W H Freeman & Co](#); c1999.

The NCBI Handbook.

Bethesda (MD)
[NCBI](#), [National Library of Medicine](#) (US); 2002 Nov.

Retroviruses.

Coffin, John M.; Hughes, Stephen H.; Varmus, Harold E.
Plainview (NY): [Cold Spring Harbor Laboratory Press](#); c1997.

Surgical Treatment - Evidence Based and Problem-Oriented.

Holzheimer, Rene G.; Mannick, John A., editors;
Munich: [Zuckschwerdt Publishers](#); c2001.
ISBN 0 7216 7443 7

Chapter 6, Smallpox and Vaccinia.

From: Vaccines. 3rd ed.
Plotkin, Stanley A.; Orenstein, Walter A., editors.
Philadelphia: [W. B. Saunders Company](#); c1999.

Primer dizayn programları

- **Macvector**
- **Seqlab**
- **Prime (GCG)**
- **Primer3 (ücretsiz)**
- **Primerquest (ücretsiz)**
- **OligoAnalyser**

• Primer dizayn edilirken; primer uzunluğu, GC içeriği, Tm değeri, çoğaltılacak dizinin konumu gibi kriterlerde istenen değişiklikler yapılabilir.

Primer3

[disclaimer](#) [source code](#)
[cautions](#) [old interface](#)

pick primers from a DNA sequence (see [NEW](#))

Paste source sequence below (5'→3', string of ACGTNacgtn -- other letters treated as N -- numbers and blanks ignored). FASTA format ok. Please N-out undesirable sequence (vector, ALUs, LINEs, etc.) or use a [Mispriming Library \(repeat library\)](#):

☒ Pick left primer or use left primer below.

☐ Pick hybridization probe (internal oligo) or use oligo below.

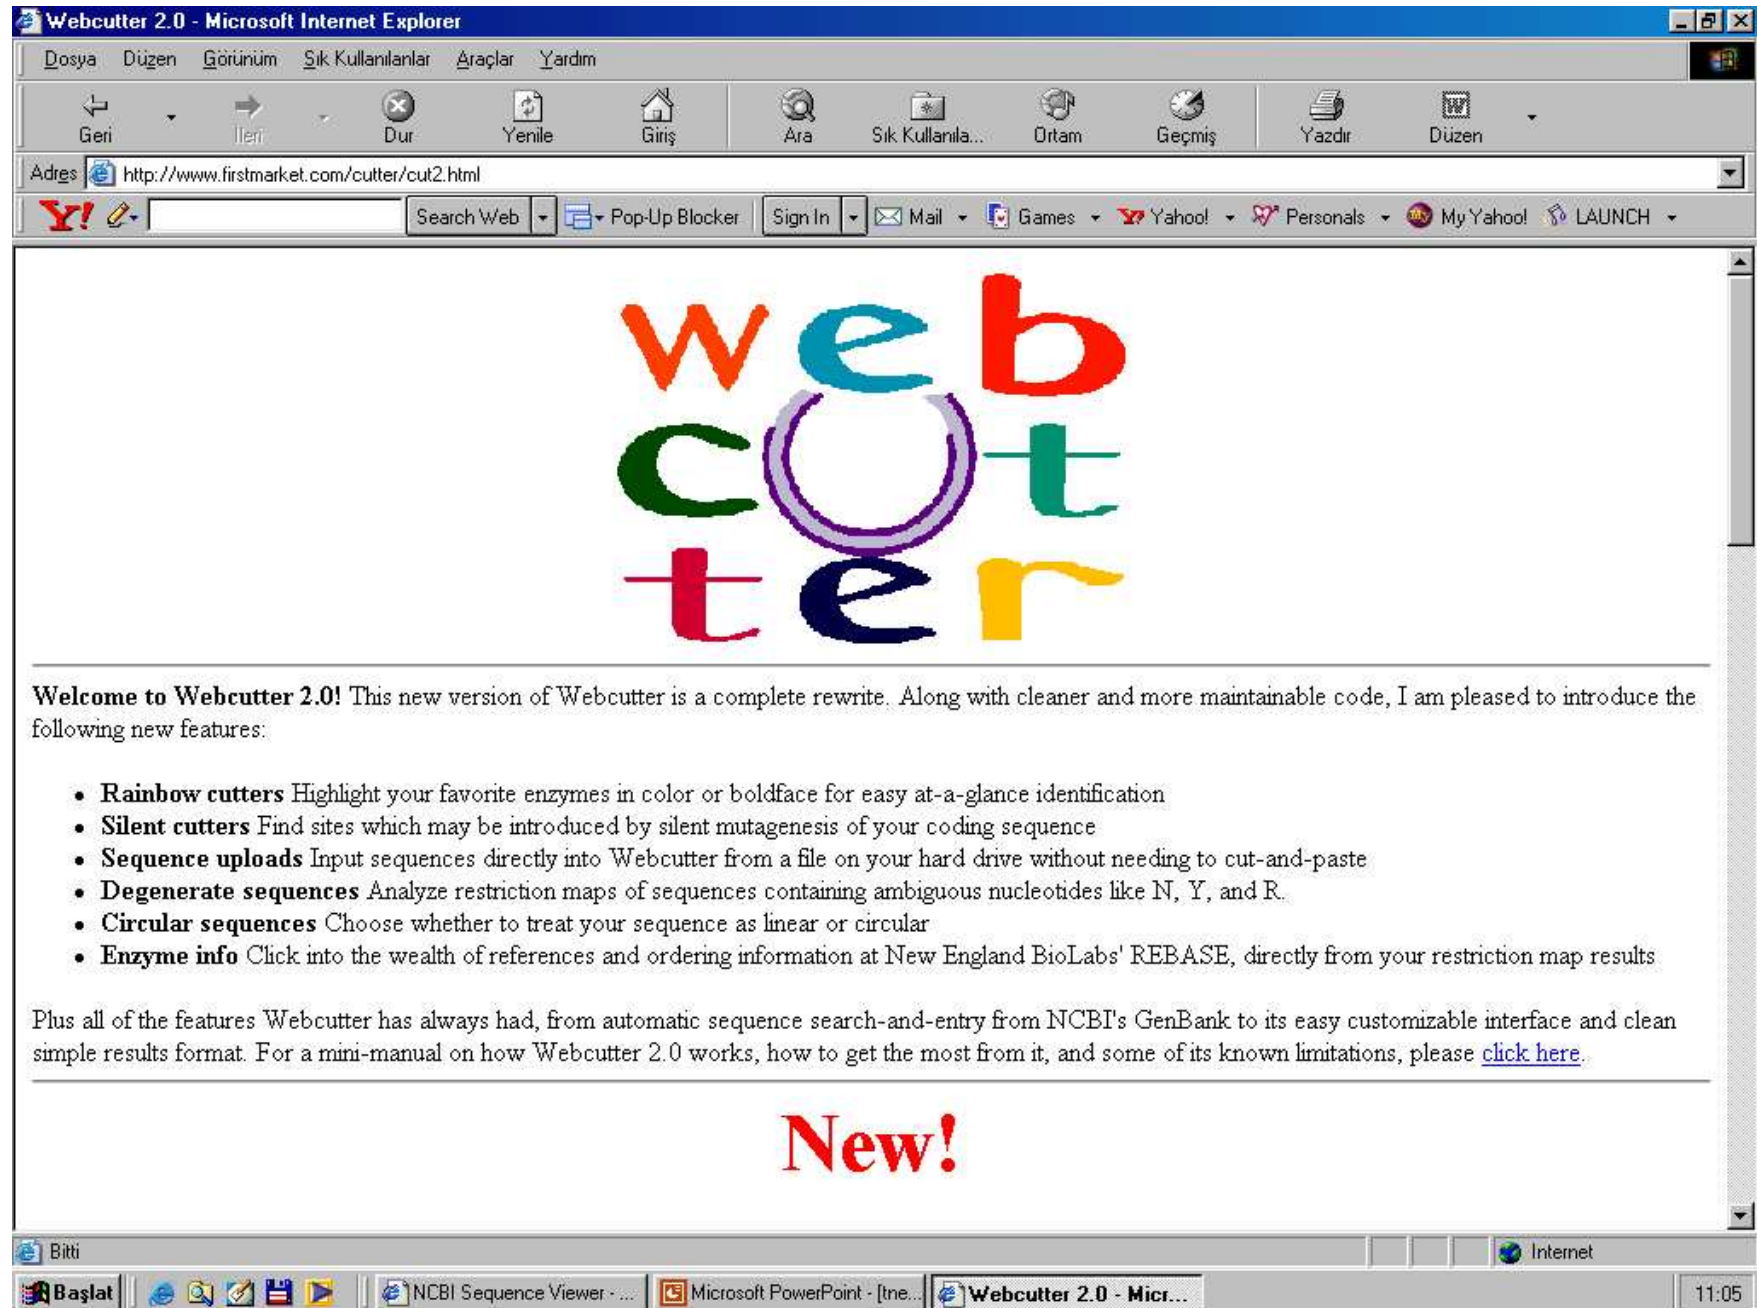

☒ Pick right primer or use right primer below (5'-

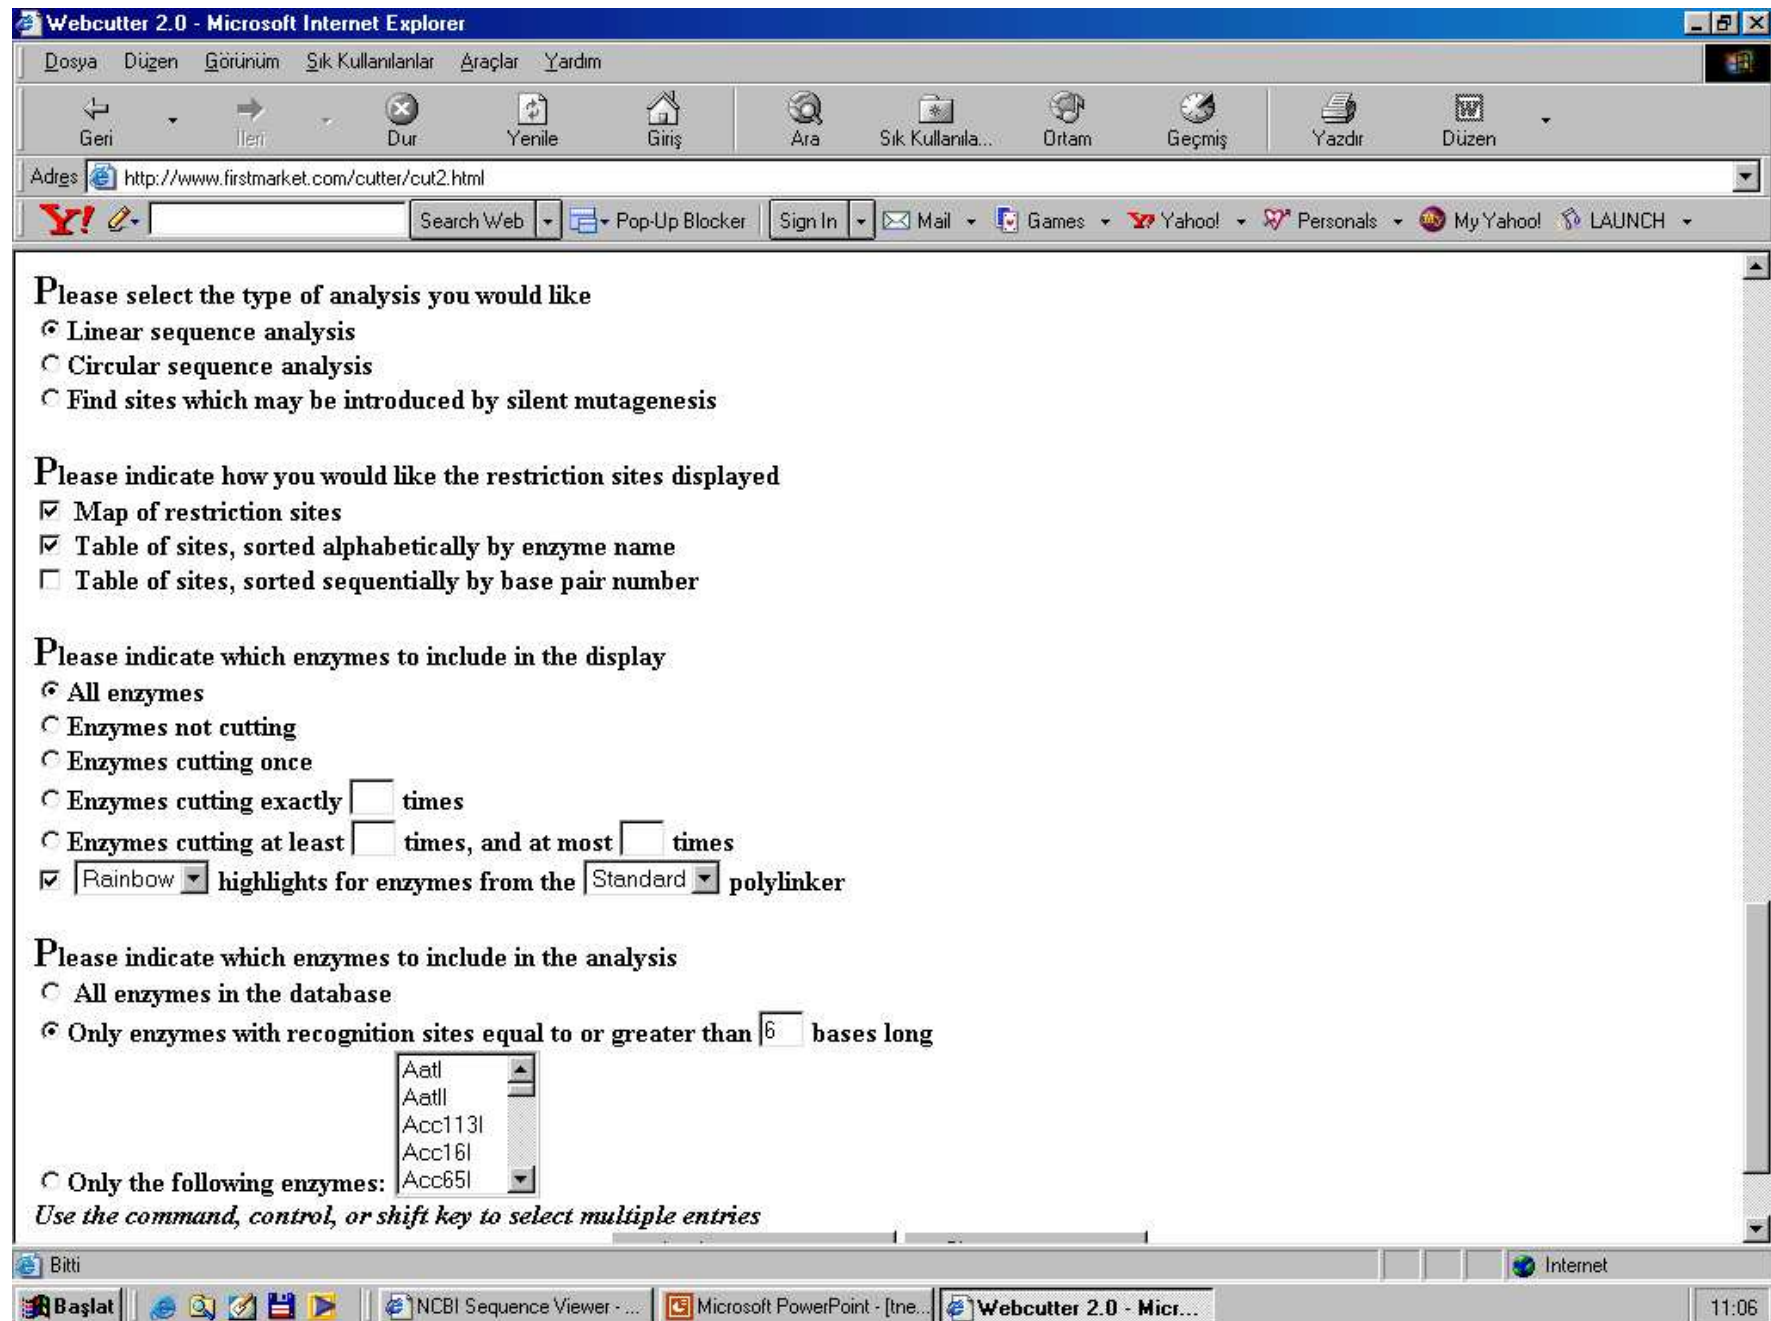

[Sequence Id:](#) A string to identify your output.

[Targets:](#) E.g. 50,2 requires primers to surround the 2 bases at positions 50 and 51. Or mark the [source sequence](#) with [- and]: e.g. ...ATCT[CCCC]TCAT.. means that primers must flank the central CCCC.
